

Download

Get Oracle database from [Oracle Database 12c Release 2](#)

Extract

Unpack and move **database** folder to **/tmp** . (also, you can extract all the folders/files and move them to here)

```
/tmp/database
```

Groups and users for oracle

Open a terminal and execute following commands with sudo permission.

```
sudo groupadd -g 502 oinstall
sudo groupadd -g 503 dba
sudo groupadd -g 504 oper
sudo groupadd -g 505 asmadmin
```

After that, create oracle user

```
sudo useradd -u 502 -g oinstall -G dba,asmadmin,oper -s /bin/bash -m oracle
```

You will prompt to set to password. set a memorable password and write it down. In case, if nothing prompts, try this command to set password

```
sudo passwd oracle
```

Install required packages

Set Ubuntu Extra Packages Repo

```
echo 'deb http://cz.archive.ubuntu.com/ubuntu precise main universe' >>
/etc/apt/sources.list.d/extra.list
```

If there is any issue in setting the repo, you can try

```
sudo -i
echo 'deb http://cz.archive.ubuntu.com/ubuntu precise main universe' >>
/etc/apt/sources.list.d/extra.list
exit
```

Now, get an update.

```
sudo apt-get update
```

Get [libmotif4](#) and install on your system separately as it is not in ubuntu repository.

Now execute this script to install all required packages.

```
sudo apt-get install alien autoconf automake autotools-dev binutils doxygen \
\
elfutils expat gawk gcc gcc-multilib g++-multilib libstdc++6:i386 ksh less
libtiff5 \
libtiff5-dev lib32z1 libaio1 libaio-dev libc6-dev libc6-dev-i386 libc6-i386
\
libelf-dev libltdl-dev libodbcinstq4-1 libodbcinstq4-1:i386 \
libpthread-stubs0 libpth-dev libstdc++5 lsb-cxx make \
pdksh openssh-server rlrwrap rpm sysstat unixodbc unixodbc-dev x11-utils \
zlibc libglapi-mesa:i386 libglu1-mesa:i386 libqt4-opengl:i386 \
libpthread-workqueue0 libpthread-workqueue-dev libzthread-2.3-2
libzthread-dev \
libpthread-stubs0-dev libaio-dev
```

(N.B. if any package is missing, google it to fix).

DB Directory Permissions

Let's set oinstall group to access oracle installation.

```
chown -R oracle:oinstall /tmp/database
```

Host file

Host file should contain the fully qualified name for the local server.

Open hosts file

```
cat /etc/hosts
```

It should have a record similar to following

```
127.0.0.1    localhost
```

Grant Connection to X Server

You need this step to load installation UI as oracle user

Test the x server

```
xclock
```

If you see a clock running you are good to go

Now run

```
xhost
```

Result should be

```
xhost SI:localuser:sajid
# sajid is my user name
```

Now let oracle user to access xhost

```
xhost +SI:localuser:oracle
```

Symlinks to Binaries and Libraries

Linking Binaries

```
ln -s /usr/bin/awk /bin/awk
ln -s /usr/bin/rpm /bin/rpm
ln -s /usr/bin/basename /bin/basename
```

Linking Libraries

```
ln -s /usr/lib/x86_64-linux-gnu /usr/lib64
cd /lib64
ln -s /lib/x86_64-linux-gnu/libgcc_s.so.1 .
```

Make Target Directories

```
mkdir -p /u01/app/oracle/product/12.2.0/dbhome_1
# dbhome_1 is database location
chown -R oracle:oinstall /u01
chmod -R 775 /u01
```

Setup configuration parameters

To add Oracle 12c Kernel Parameters, open

```
sudo nano /etc/sysctl.conf
```

Add to the end of the file

```
#### Oracle 12c Kernel Parameters ####
fs.suid_dumpable = 1
fs.aio-max-nr = 1048576
fs.file-max = 6815744
kernel.shmall = 2097152
kernel.shmmax = 536870912
```

```
kernel.shmmni = 4096
# semaphores: semmsl, semmns, semopm, semmni
kernel.sem = 250 32000 100 128
net.ipv4.ip_local_port_range = 9000 65500
net.core.rmem_default=4194304
net.core.rmem_max=4194304
net.core.wmem_default=262144
net.core.wmem_max=1048586
```

Oracle User Settings for Oracle 12c

```
sudo nano /etc/security/limits.conf
```

Add the following lines

```
#### oracle User Settings 4 Oracle 12c ####
oracle      soft  nproc   2047
oracle      hard  nproc   16384
oracle      soft  nofile  1024
oracle      hard  nofile  65536
oracle      soft  stack   10240
```

Add Paths to oracle's `.bashrc`

Login as Oracle

```
su oracle
```

Edit `.bashrc` file

```
sudo nano ~/.bashrc
```

Insert:

```
# Oracle Settings
TMP=/tmp;
export TMP TMPDIR=$TMP;
export TMPDIR ORACLE_HOSTNAME=127.0.0.1;
export ORACLE_HOSTNAME
ORACLE_UNQNAME=DB12C;
export ORACLE_UNQNAME
ORACLE_BASE=/u01/app/oracle;
```

```
export ORACLE_BASE
ORACLE_HOME=$ORACLE_BASE/product/12.2.0/dbhome_1;
export ORACLE_HOME
ORACLE_SID=SID;
export ORACLE_SID
PATH=/usr/sbin:$PATH;
export PATH
PATH=$ORACLE_HOME/bin:$PATH;
export PATH
LD_LIBRARY_PATH=$ORACLE_HOME/lib:/lib:/usr/lib:/usr/lib64;
export LD_LIBRARY_PATH
CLASSPATH=$ORACLE_HOME/jlib:$ORACLE_HOME/rdbms/jlib;
export CLASSPATH
```

(N.B.: be careful about paths)

Installation

Load the New Kernel Parameters.

```
/sbin/sysctl -p
```

Load New .bashrc Settings

```
source ~/.bashrc
```

Installation

```
sudo chmod -R +x /tmp/database
/tmp/database/runInstaller
```

UI Steps

Oracle Database 12c Release 1 Installer - Step 1 of 9

Configure Security Updates

Provide your email address to be informed of security issues, install the product and initiate configuration manager. [View details.](#)

Email:

Easier for you if you use your My Oracle Support email address/username.

☐ I wish to receive security updates via My Oracle Support.

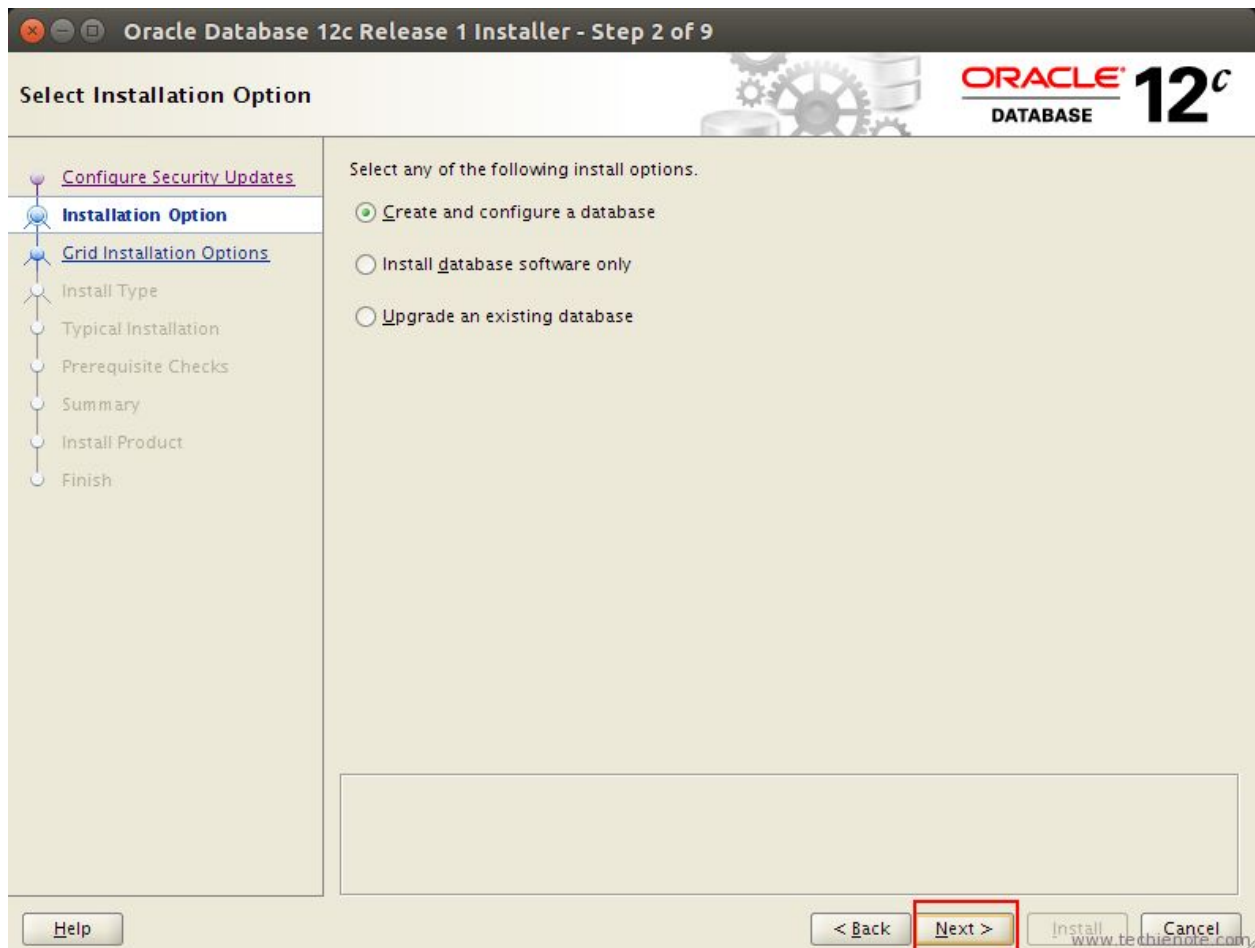

My Oracle Support Password:

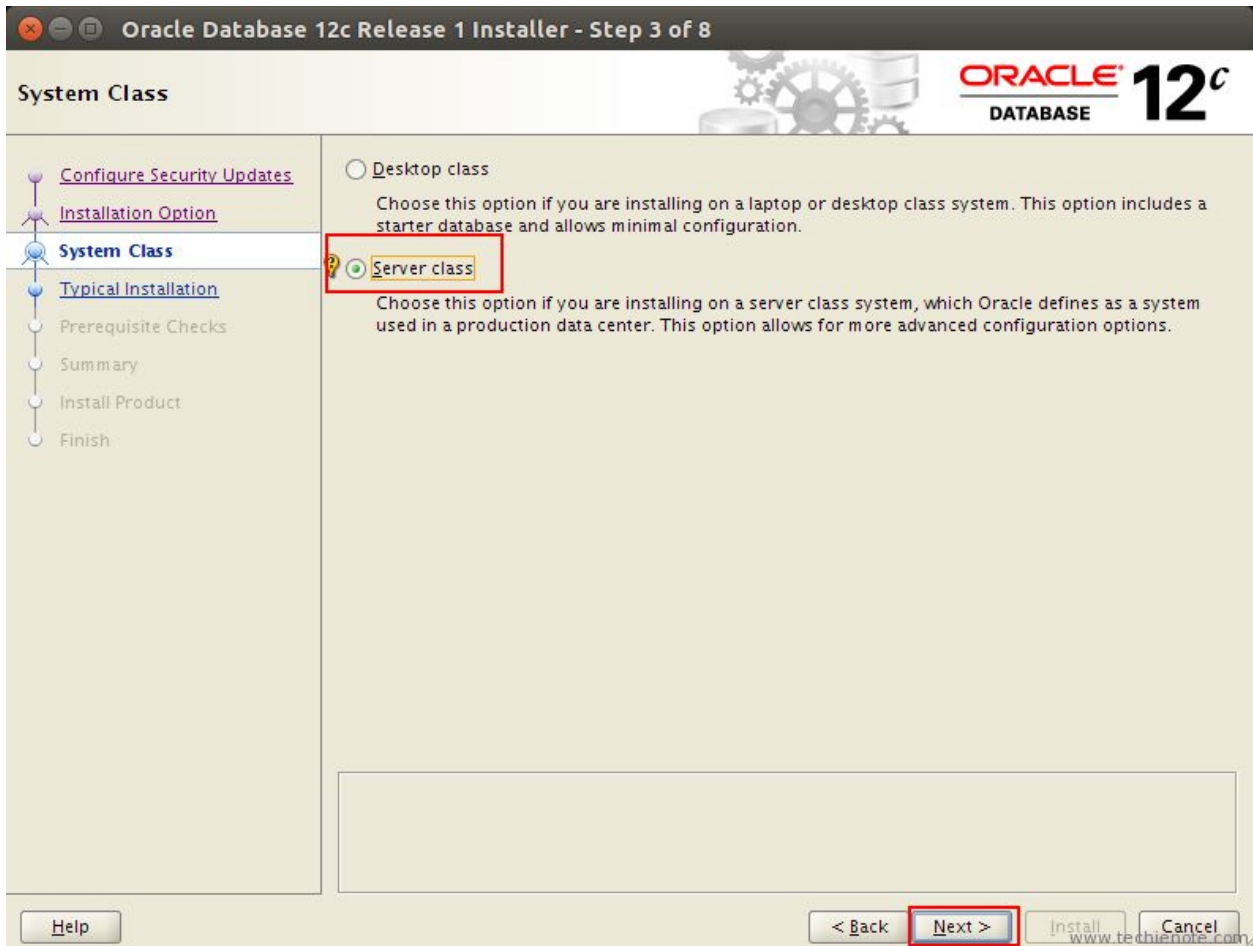

My Oracle Support Username/Email Address Not Specified

 You have not provided an email address.

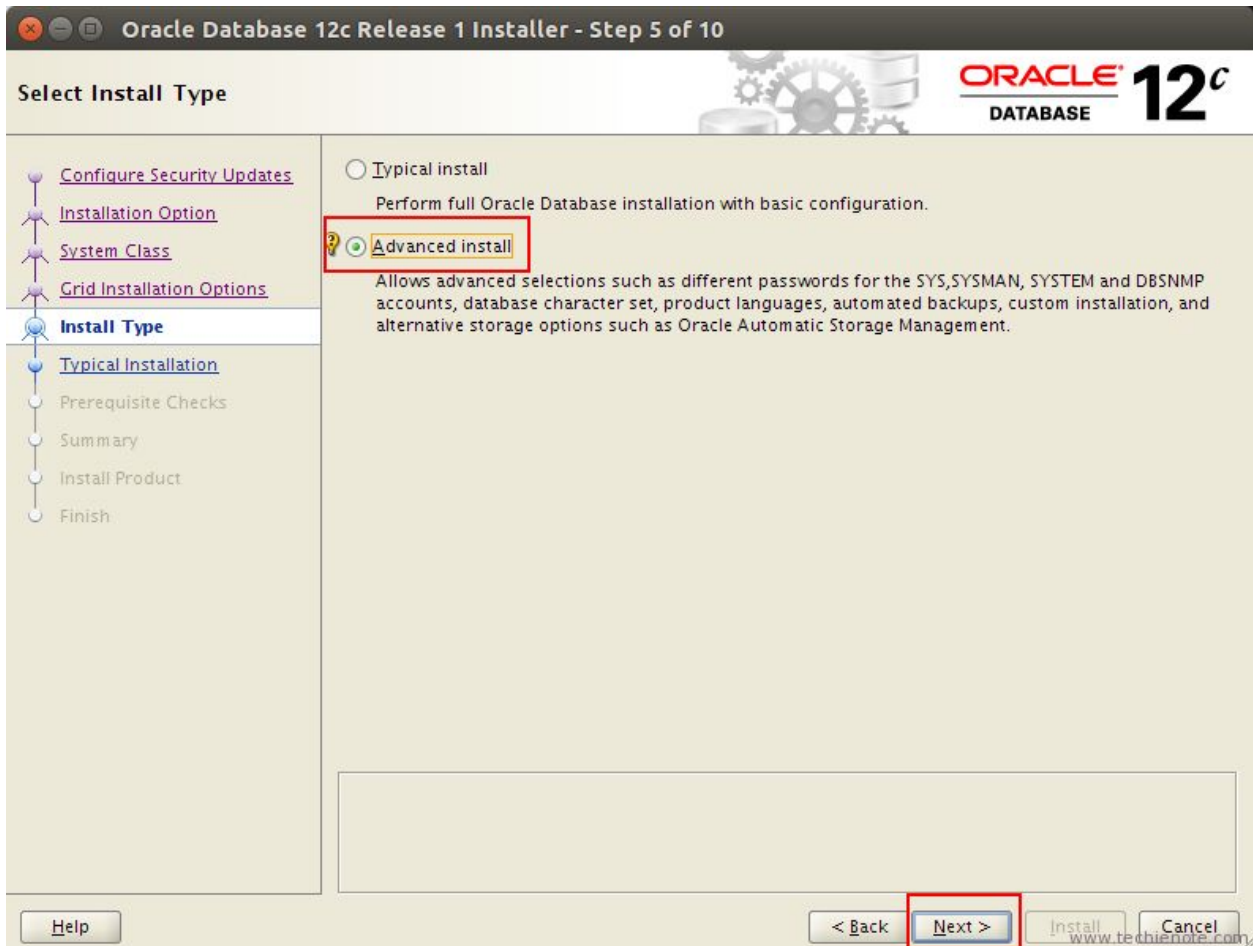

Do you wish to remain uninformed of critical security issues in your configuration?

As the Ubuntu isn't a OS supported by oracle this error occurs, click yes.

Installation Location

Create Inventory

Prerequisite Checks

Summary

Install Product

Finish

You are starting your first installation on this host. Specify a directory for installation metadata files (for example, install log files). This directory is called the "inventory directory". The installer automatically sets up subdirectories for each product to contain inventory data. The subdirectory for each product typically requires 150 kilobytes of disk space.

Inventory Directory: /u01/app/orainventory

Browse...

Specify an operating system group whose members have write permission to the inventory directory (orainventory).

orainventory Group Name: oinstall

Summary

Provide the identifier information required to access the database uniquely. An Oracle database is uniquely identified by a Global database name, typically of the form "name.domain". A database is referenced by atleast one Oracle instance which is uniquely identified from any other instance on this computer by an Oracle system identifier (SID).

Global database name:

Oracle system identifier (SID):

☐ Create as Container database

Creates a database container for consolidating multiple databases into a single database and enables database virtualization.

Pluggable database name:

Memory

Character sets

Sample schemas

Enabling Automatic Memory Management allows the database to distribute memory automatically between the system global area (SGA) and the program global area (PGA), based on user-specified overall database memory target size. If automatic memory management is not enabled, then the SGA and PGA must be sized manually.

☒ Enable Automatic Memory Management

Allocate memory:

25615673916

1,56740 %

SGA target:	AUTO	MB
PGA aggregate target:	AUTO	MB
Target database memory:	1567	MB

Oracle Database 12c Release 1 Installer - Step 16 of 21

Specify Schema Passwords

The starter database contains pre-loaded schemas, most of which have passwords that are expired and locked at the end of installation. After installation is complete, you must unlock and set new passwords for those accounts you want to use. Schemas used for database management and postinstallation functions are left unlocked, and passwords for these accounts will not expire. Specify the passwords for these accounts.

☐ Use different passwords for these accounts

	Password	Confirm password
SYS		
SYSTEM		
DBSNMP		

☒ Use the same password for all accounts

Password: Confirm password:

Messages:

 Password:[INS-30011] The ADMIN password entered does not conform to the Oracle recommended standards.

Once you clicked on install button real installation begins. After this point you expect a lot of errors can't ignore. When you see a error message don't abort or skip, just refer the troubleshooting section.

You can find the files from [here](#).

Copy the related files to the directoros, for more details, see [youtube](#).

When it is done, you will see

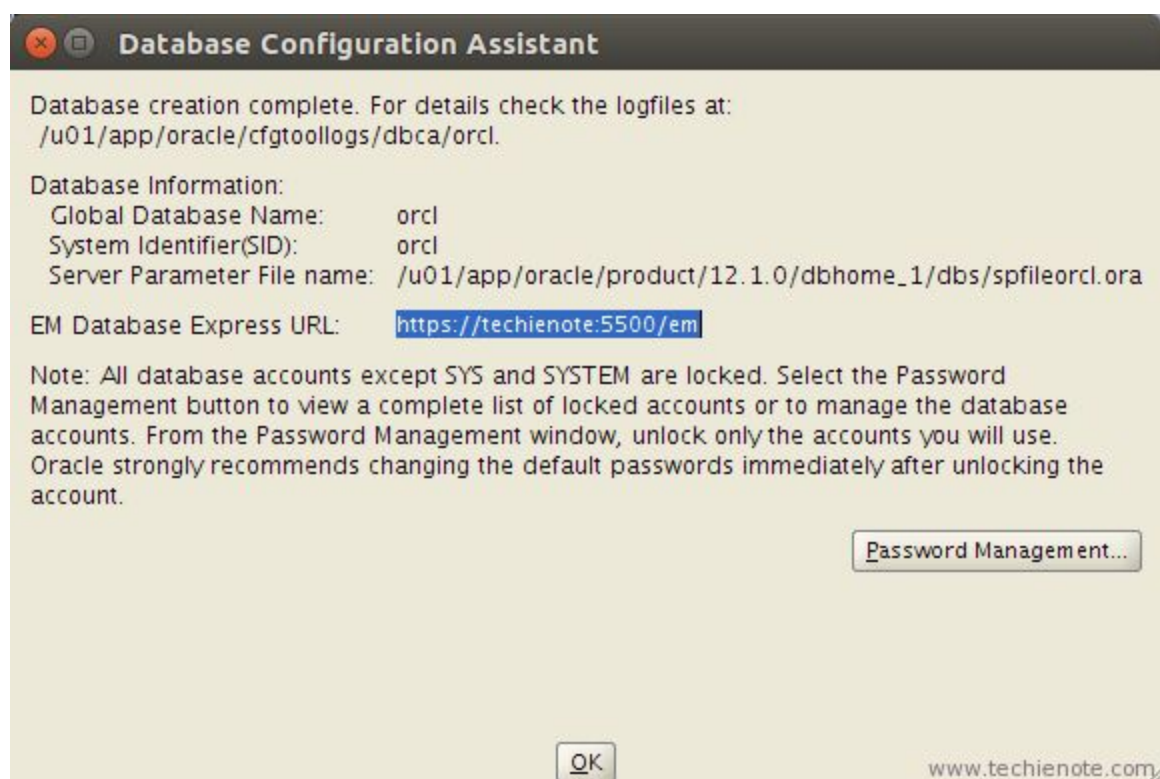

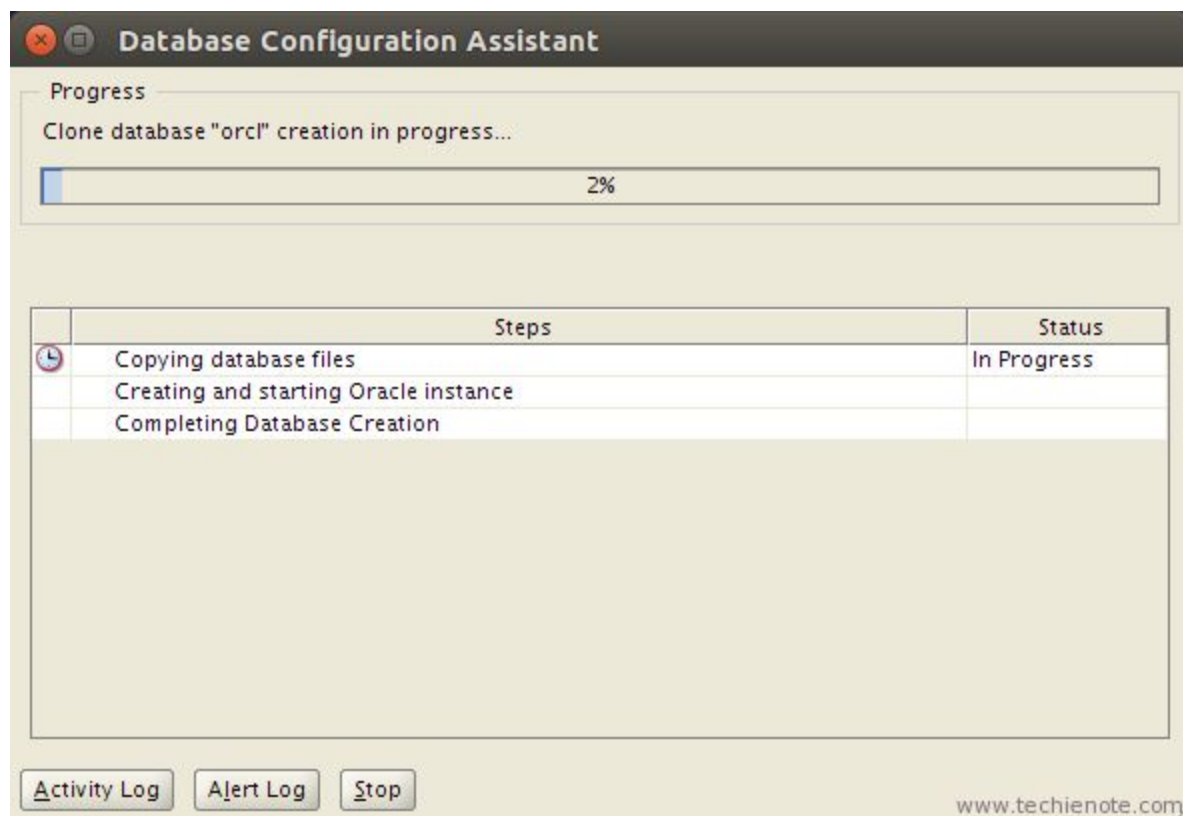

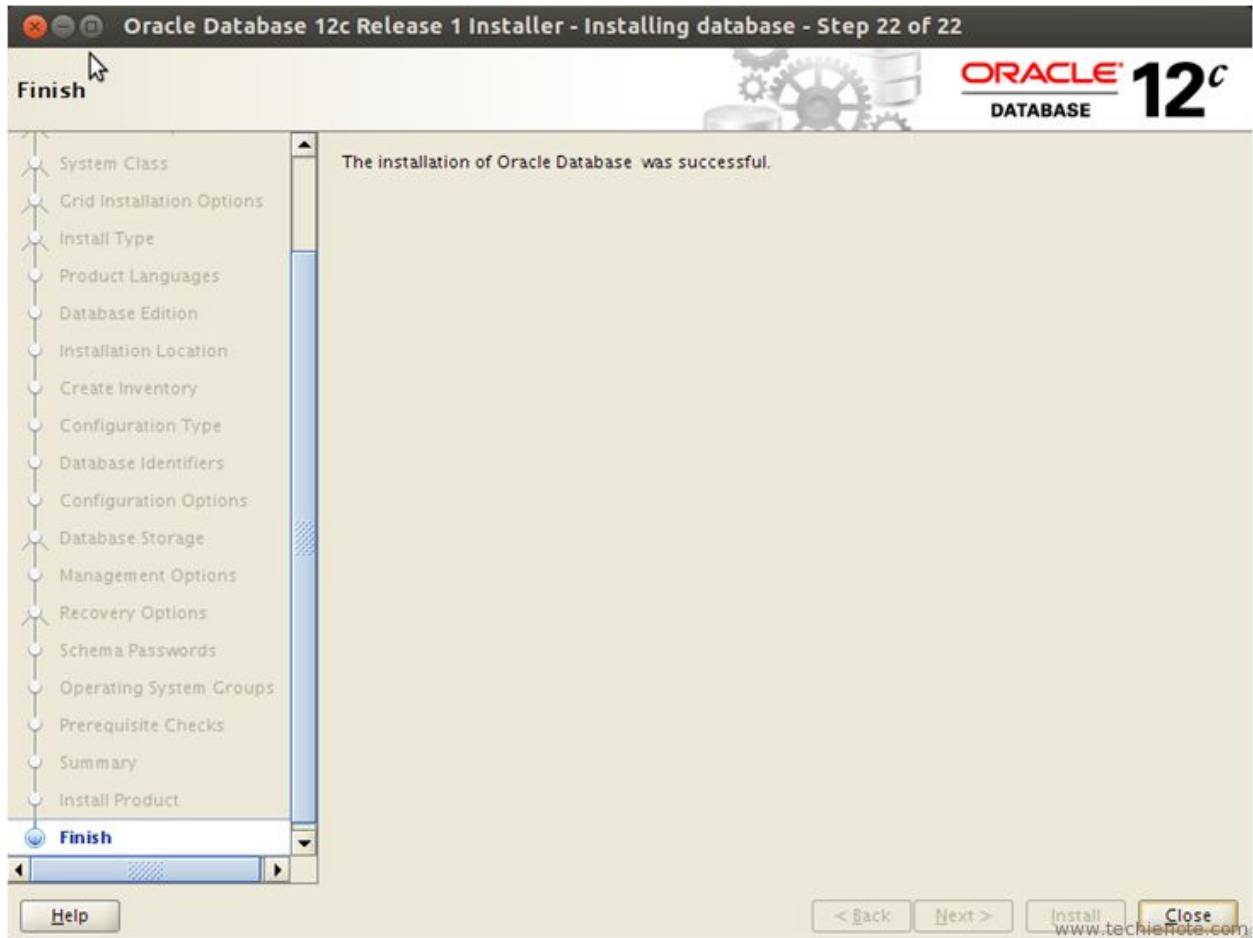

Now as per the instructions run the following commands with root / root equivalent user:

```
--/u01/app/oraInventory/orainstRoot.sh  
--/u01/app/oracle/product/12/dbhome_1/root.sh
```

You will see something like

```
Copying dbhome to /usr/local/bin ...  
Copying oraenv to /usr/local/bin ...  
Copying coraenv to /usr/local/bin ...  
/etc/oratab file
```

Post Installation task

To start listener run following as oracle user

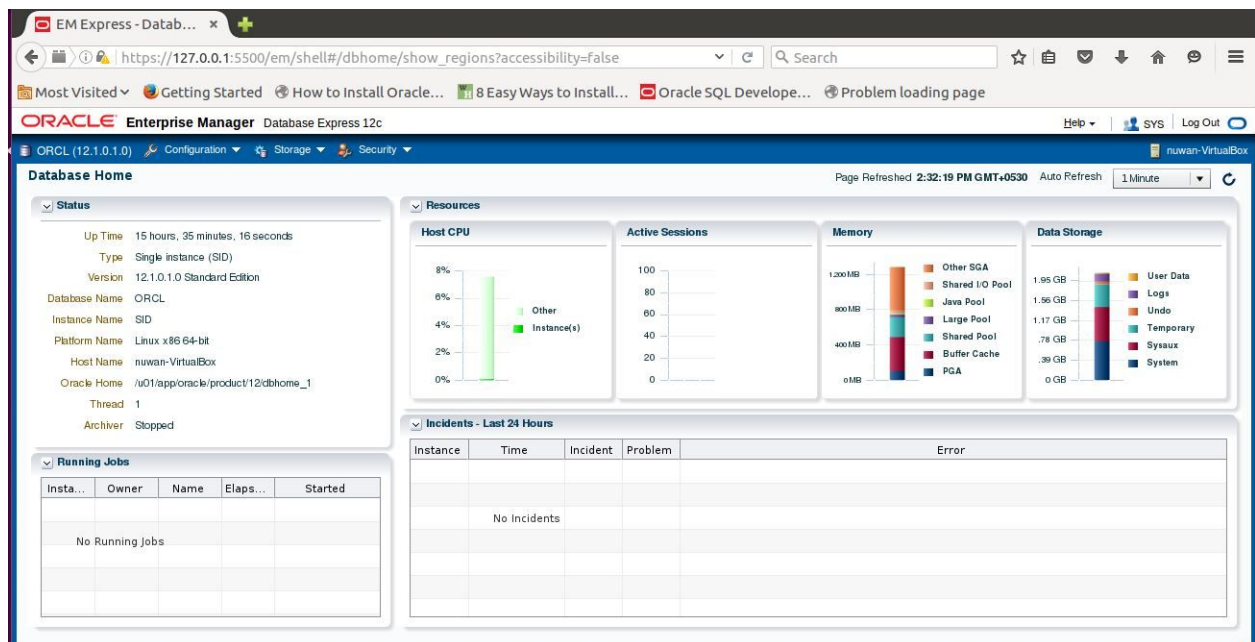

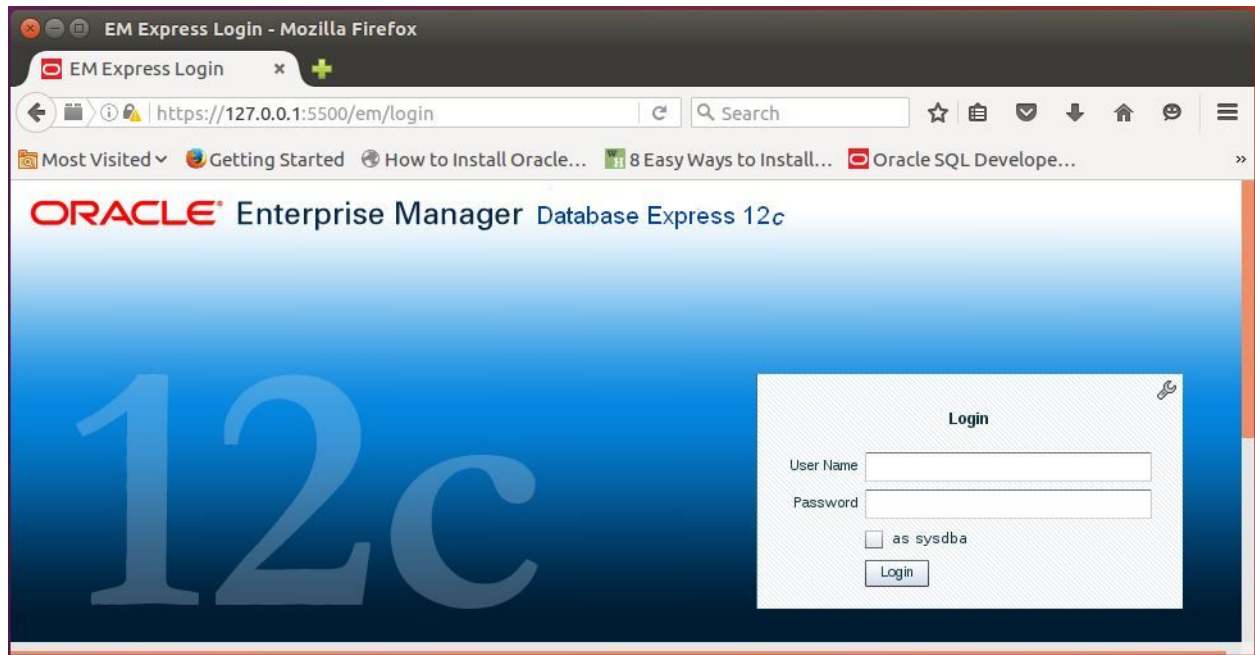

```
$ORACLE_HOME/bin/lsnrctl start
```

To start database run following

```
sqlplus /nolog
SQL> connect sys as sysdba
SQL> STARTUP;
SQL> EXIT;
```

Start em

<https://127.0.0.1:5500/em>

Congratulations, hope you have successfully installed Oracle database 12c on your ubuntu 16.04 64-bit machine
